

# ITC313 - Makefile

## Fundamentals of programming: Introduction to C++/C

Dominique Ginhac

# Tutorial

## Makefile

Students are introduced to the compilation of multiple files using Makefile.

```
[code]$ ls
point.cpp  point.h  point_main.cpp
[code]$ g++ -c point.cpp
[code]$ ls
point.cpp  point.h  point.o  point_main.cpp
[code]$ g++ -c point_main.cpp
[code]$ ls
point.cpp  point.h  point.o  point_main.cpp  point_main.o
[code]$ g++ -o point_main point.o point_main.o
[code]$ ls
point.cpp  point.h  point.o  point_main  point_main.cpp  point_main.o
[code]$ ./point_main
New point (2.3,-5.7)
x_a = 2.3
y_a = -5.7
New point (0,0)
x_point = 0
y_point = 0
New point (0,0)
...
```

When editing a file, how to be sure to  
compile the adequate file ?

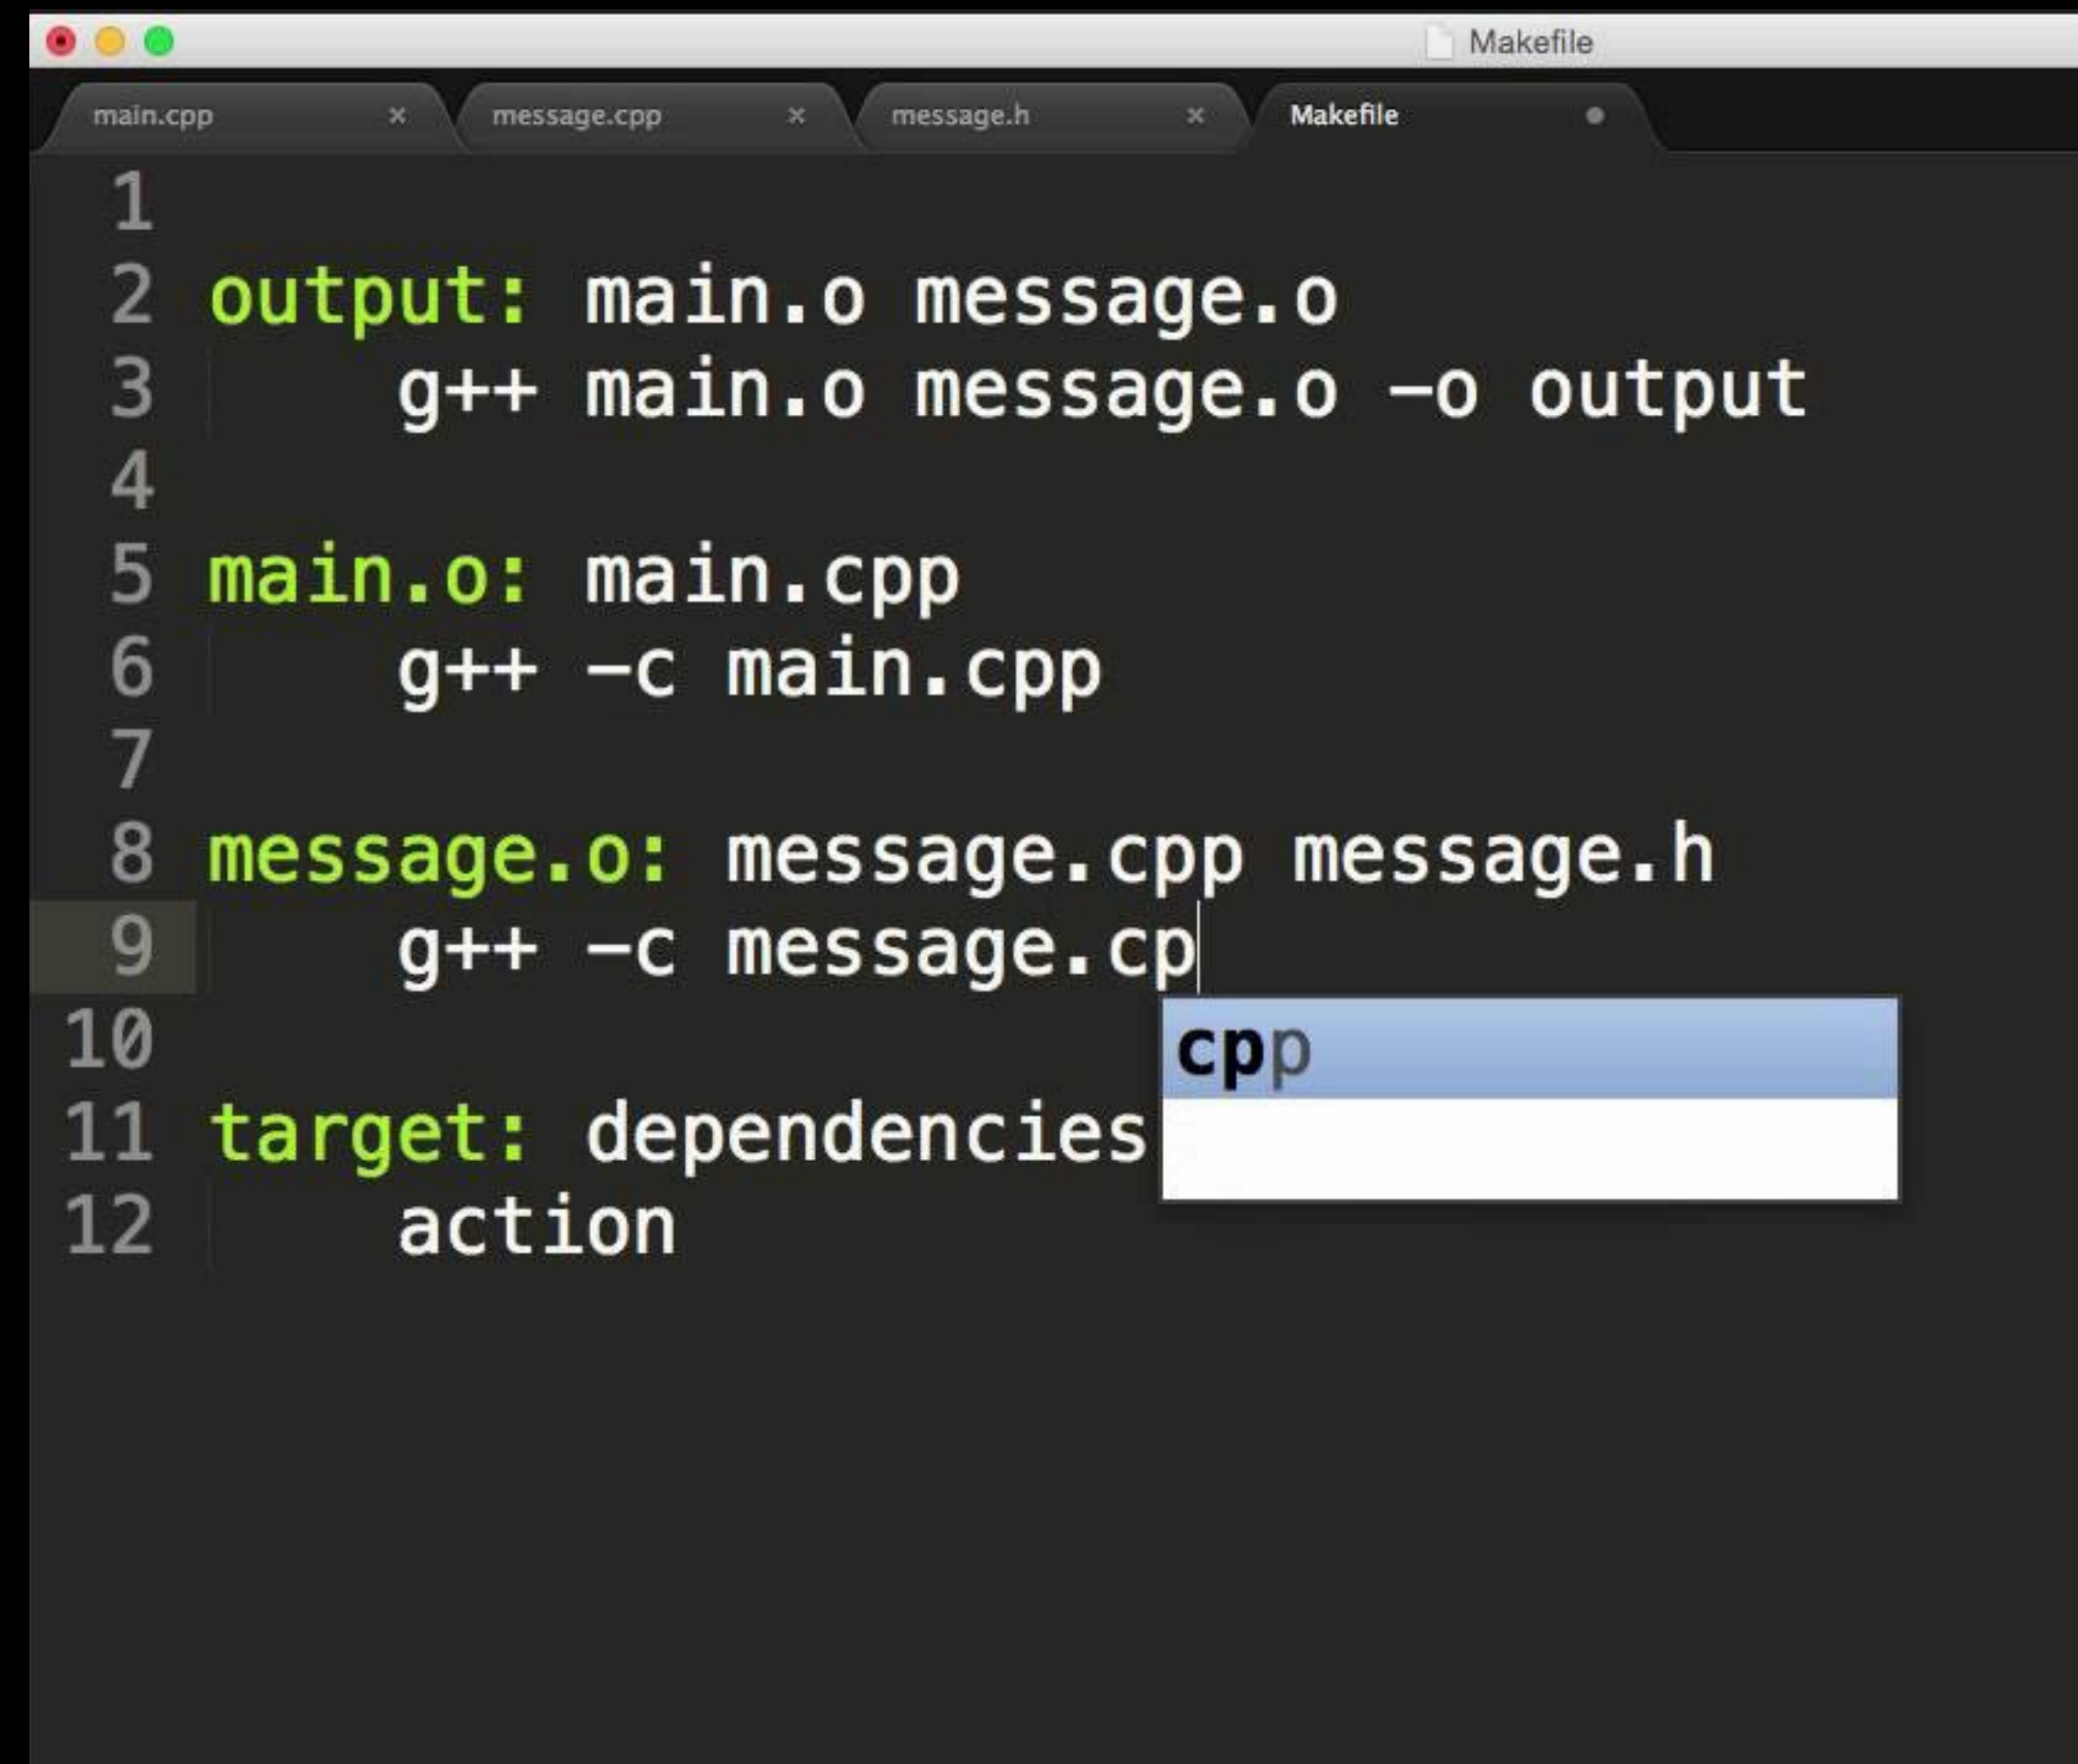

# Compiling multiple files

## Automate the compilation process with Makefiles

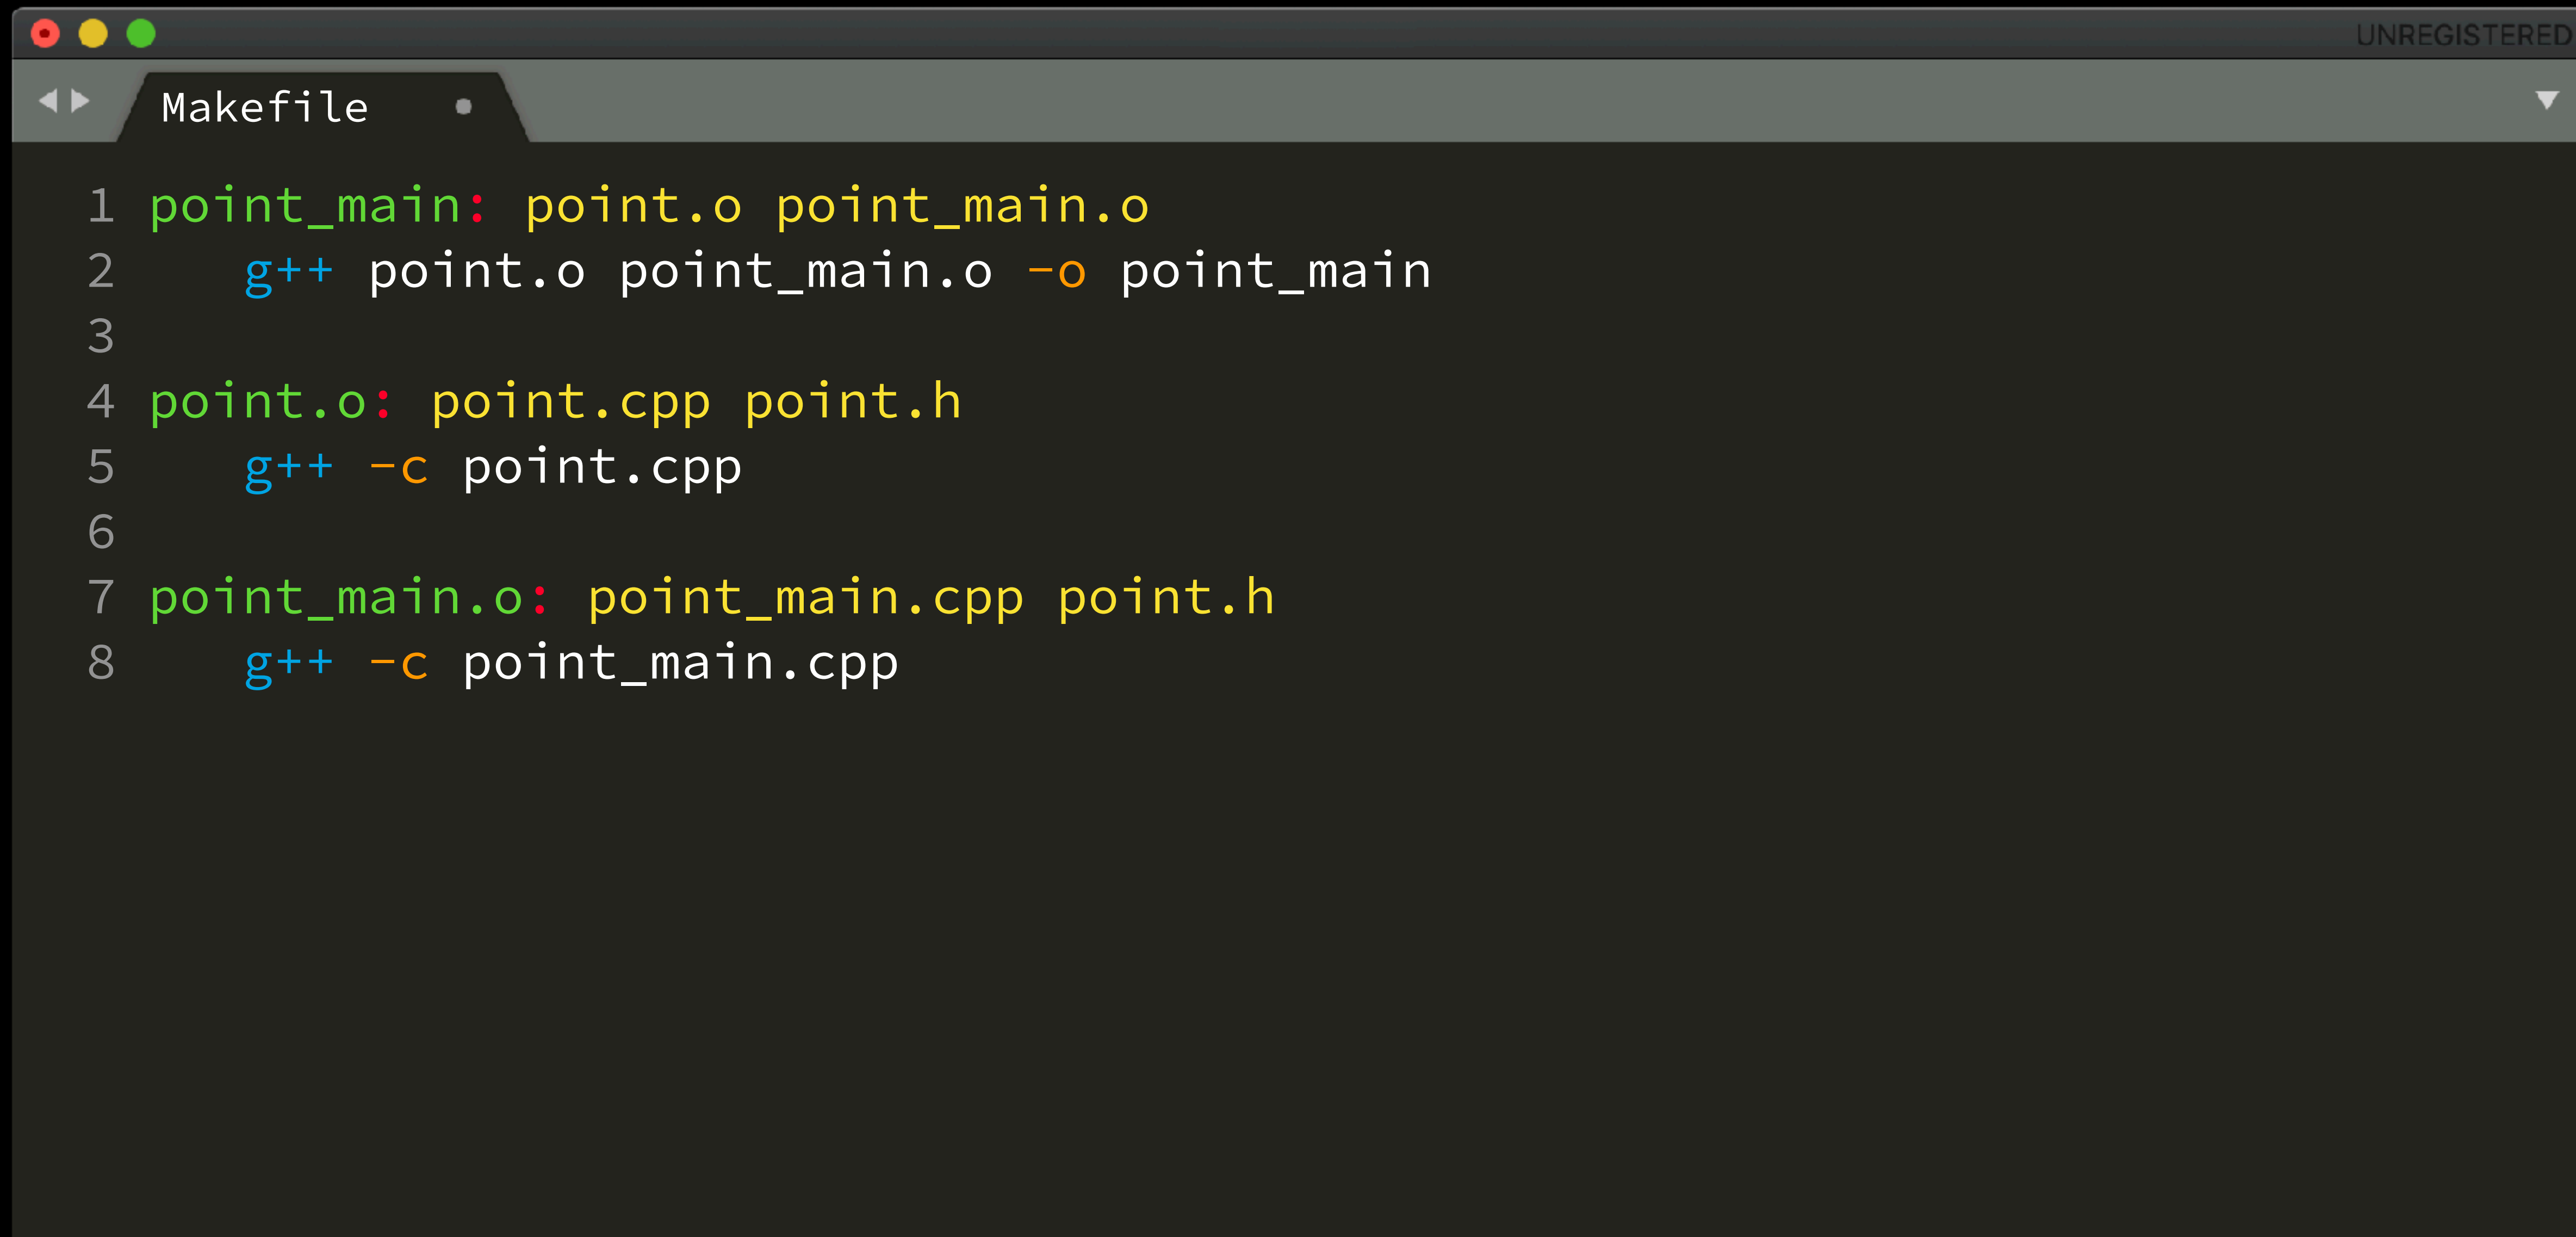

You just tell the Makefile "What you want to make" and "How it goes about making it".

You just type "make"

```
1
2 output: main.o message.o
3     g++ main.o message.o -o output
4
5 main.o: main.cpp
6     g++ -c main.cpp
7
8 message.o: message.cpp message.h
9     g++ -c message.cpp
10
11 target: dependencies
12     action
```

# A basic Makefile

```
1 point_main: point.o point_main.o
2     g++ point.o point_main.o -o point_main
3
4 point.o: point.cpp point.h
5     g++ -c point.cpp
6
7 point_main.o: point_main.cpp point.h
8     g++ -c point_main.cpp
```

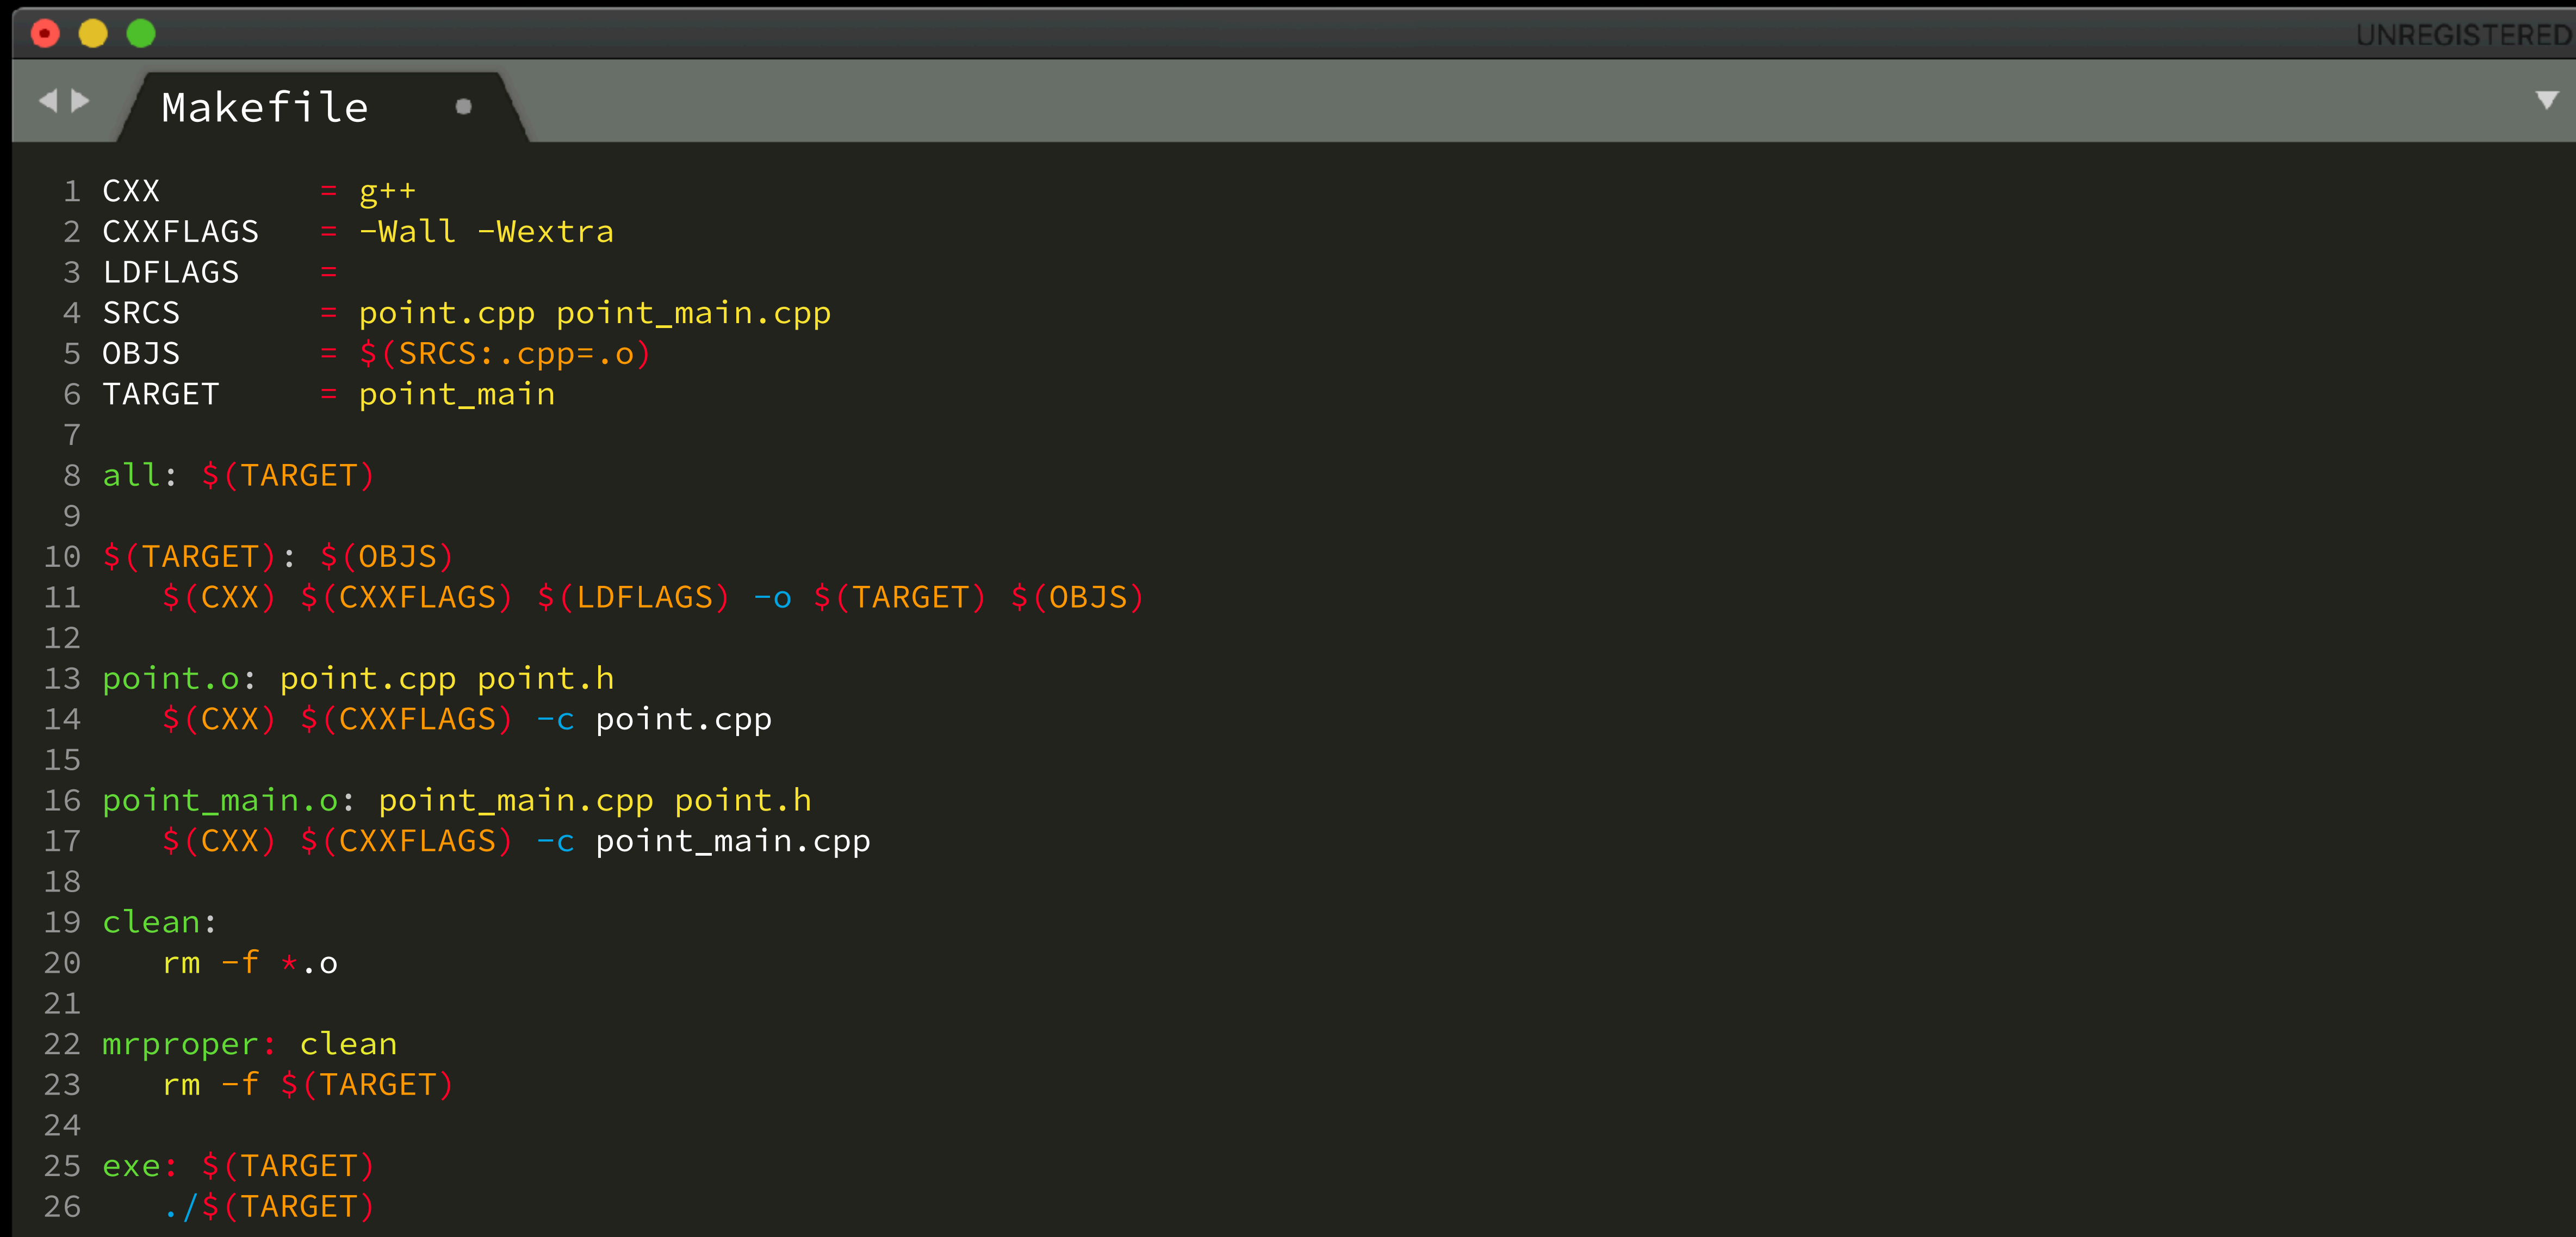

# A basic Makefile

```
UNREGISTERED
Makefile
1 all: point_main
2
3 point_main: point.o point_main.o
4     g++ point.o point_main.o -o point_main
5
6 point.o: point.cpp point.h
7     g++ -c point.cpp
8
9 point_main.o: point_main.cpp point.h
10    g++ -c point_main.cpp
11
12 clean:
13     rm -f *.o
14
15 mrproper: clean
16     rm -f point_main
17
18 exe: point_main
19     ./point_main
```

# A more generic Makefile

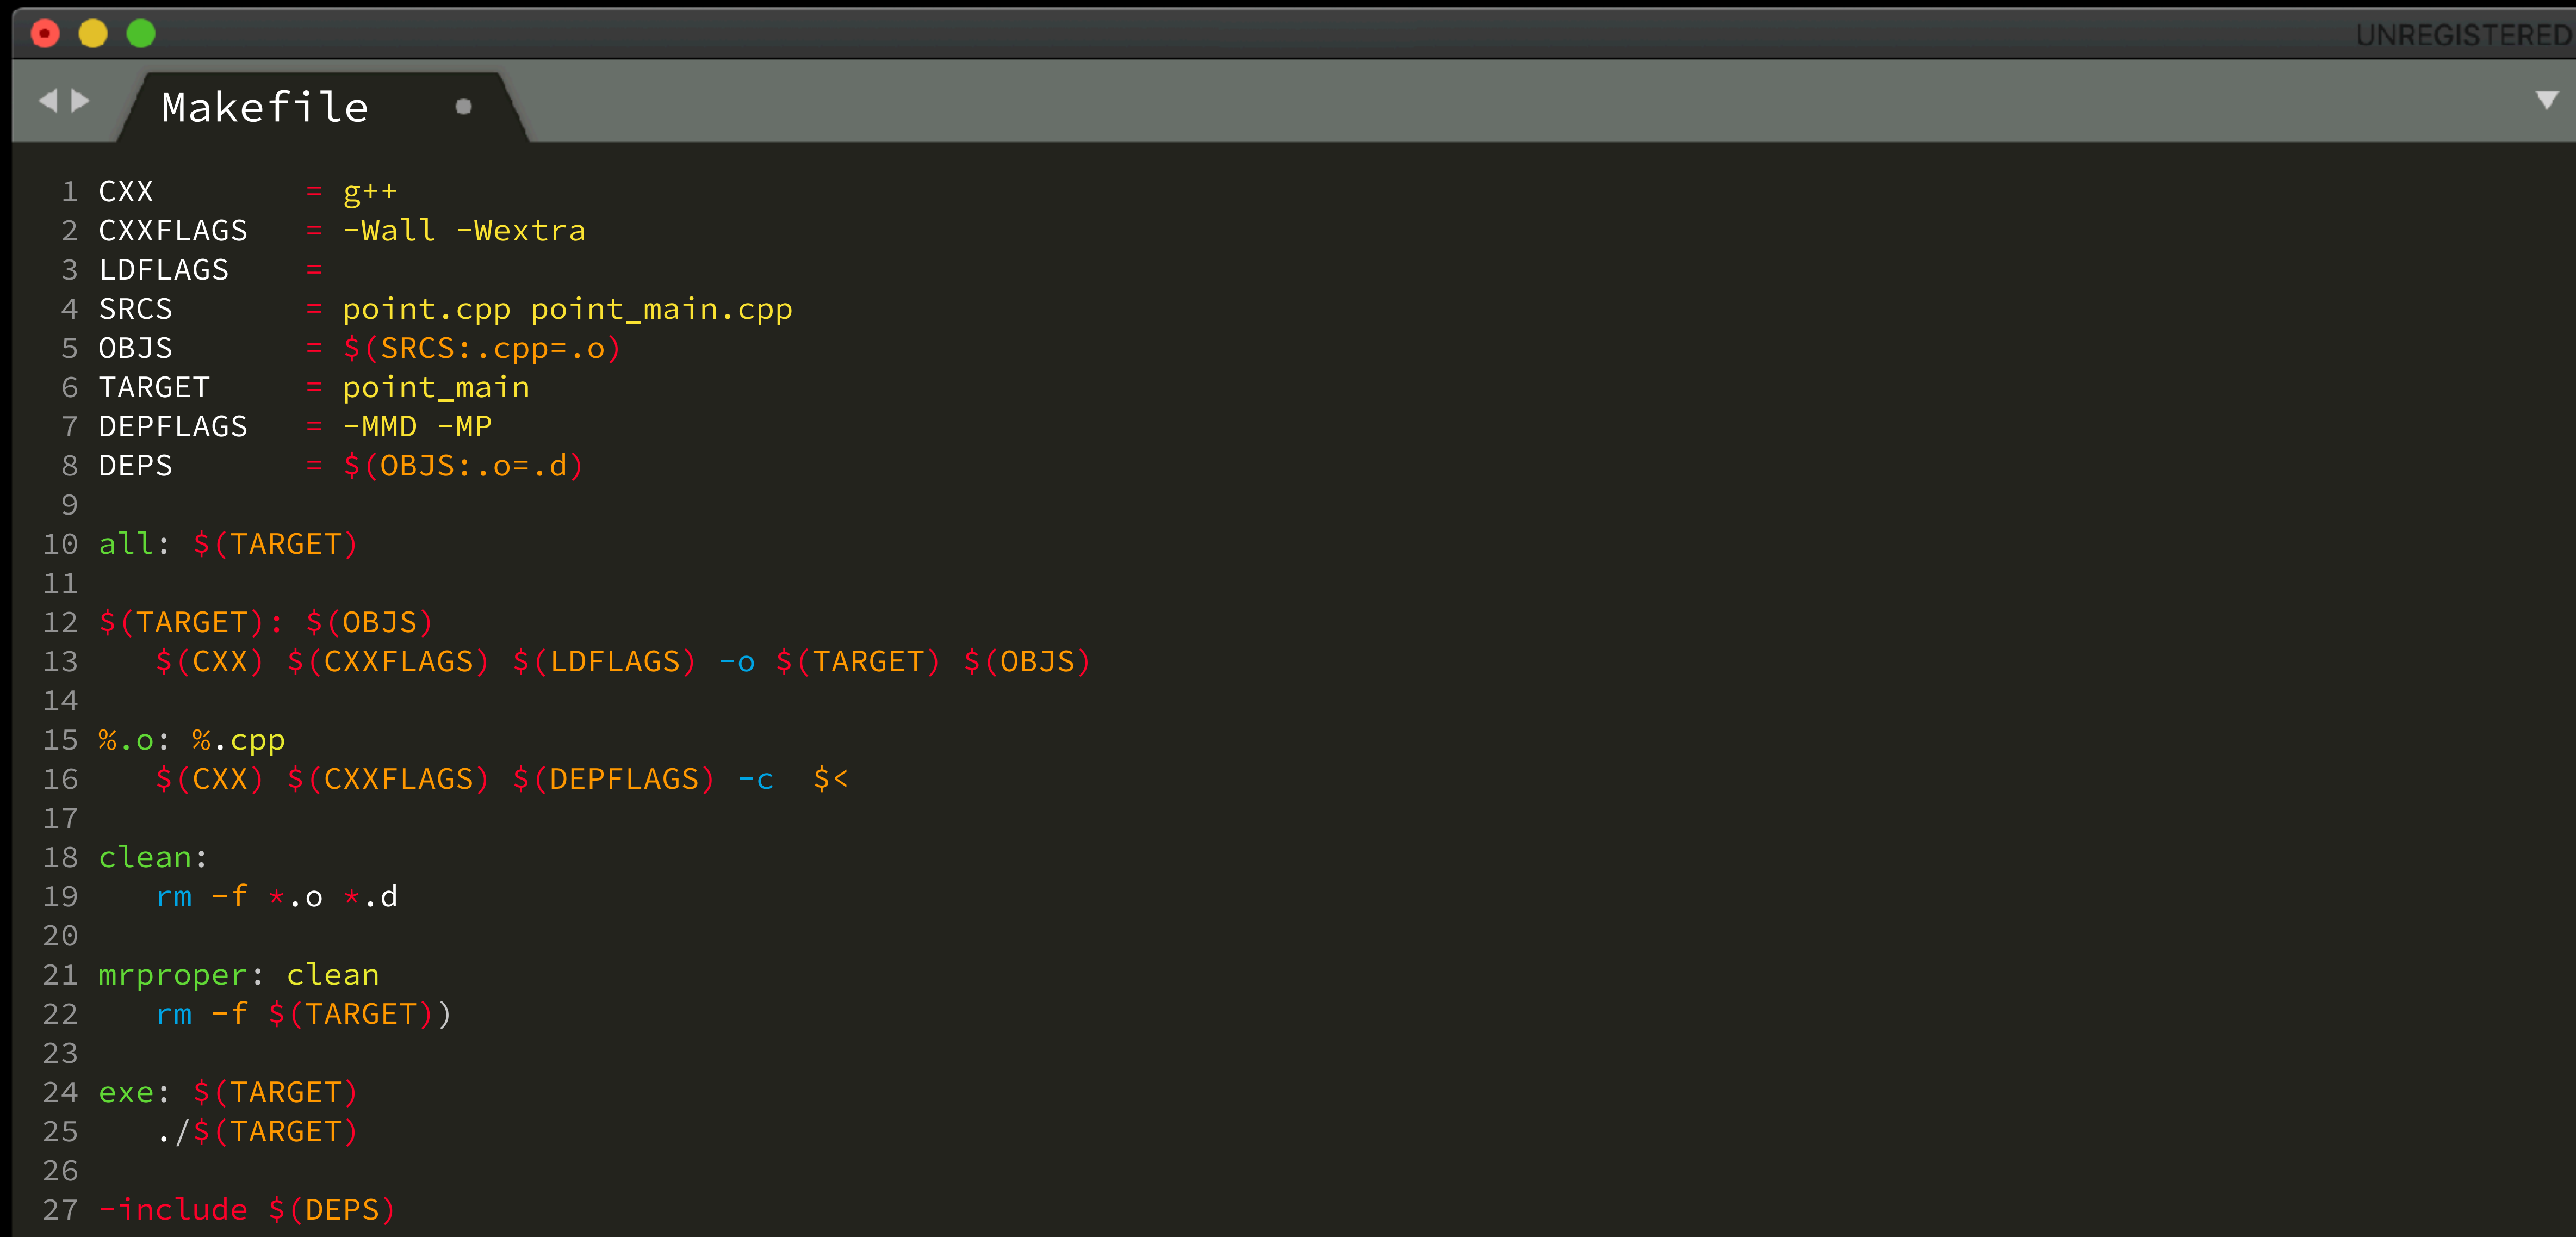

```
